Person Identification Using Deep Learning Method

Finall Year Project. | 2023

- Developed a deep learning model for accurate and efficient person identification in images and videos. The project aimed to enhance security and streamline identification processes in various applications.

Key Contribution

- Researched and implemented state-of-the-art deep learning architectures, including Convolutional Neural Networks (CNNs) and Recurrent Neural Networks (RNNs), to extract features for person identification.
- Preprocessed and augmented a diverse dataset of images and videos to improve model generalization and robustness
